

# Plus! Reporting & Assessment

Reduces administration time and adds value to reporting to parents

The reporting module of *Plus!* for schools by Schoolbacs

*Assessment or reporting time can be fraught, with staff and managers already under time pressure. For anyone tired of playing chase the paper or disc, or wanting to get more out of parental reporting for less effort, then it's time to look at the **Plus! for schools** reporting and assessment module.*

## Ease time pressure and boost teamwork

Create, approve and publish reports at a time convenient to you online in school or at home. Instantly preview final reports as they are being prepared for an overview progress in the reporting process.

## Added value for parents

Layout reports to suit individual school requirements and 'house styles', using the school defined and/or the pre-configured National Curriculum subject categories and unlike other report writing programs, teachers are not limited to using a word bank.

Publish completed reports on paper or (at your choice) online for viewing by today's connected generation of preparatory school parents.

## Added value for teachers

Summaries and other statistics, by class, teaching group or by pupil, are instantly available, enabling teachers, form tutors, or senior managers to monitor overall progress at a glance. Furthermore, it is planned to enable live school data to be compared with pre-loaded National Curriculum Key Stage statistics and grade predictors, enabling informed judgements about educational priorities.

## No specialist in-house ICT skills required

If all this sounds beyond your school's ICT capacity, then think again.

*Plus! for schools* is scaleable to schools of any size, can be operational in one week and requires no specialist in-house ICT skills.
